

VEHICLE AND EQUIPMENT FLUIDS

Our goal as a City is to minimize and contain releases of vehicle and equipment fluids to reduce the discharge of pollutants into storm water runoff. Here are a few helpful tips to keep pollutants from entering the Red River through the storm sewer system.

BASIC FEULING INFORMATION

- ☑ Avoid topping off of fuel tanks to reduce accidental spillage.
- ☑ Dispose wash water from cleaning windshields to the sanitary sewer system.
- ☑ Keep spill response equipment, including absorbent materials and disposal container, for accidental spills at fueling station.

CLEAN UP SPILLS

- ☑ If it is safe to do so, immediately contain and clean up any chemical and/or hazardous material spills.
- ☑ Properly dispose of used oil, fluids, lubricants and spill materials. These materials can be disposed of by a licensed hauler or contractor.
- ☑ Do not bury spills or wash them down with water.

LEAKS AND DRIPS

- ☑ Inspect vehicles and equipment for leaks on each day of use. Repair leaks promptly.
- ☑ Place drip pans or absorbent pads under or around leaky equipment.
- ☑ Do not allow grease, oil or chemicals to drip onto the ground.
- ☑ Always have spill kits and clean up material available.
- ☑ Clean up all spills and leaks. Promptly dispose of waste and spent cleaning material.
